

OPTRIENT™

MoCo

OPTRIENT™ MoCo is a foliar spray that provides nut and fruit trees with key nutrients to promote flower retention. With this increased window for flower retention, there is more time for pollination to occur, which can boost production and orchard performance. Combining molybdenum and cobalt, MoCo comes ready-made, meaning it can be poured directly into the tank for application.

KEY BENEFITS

- Uniform coverage over an entire tree via foliar spray application.
- Promotes flower retention without the use of chemicals and increased risk of doubling.
- Improves in-season nitrogen metabolism to help improve fruit and nut retention.
- Quick absorption of nutrients into the plant.
- Assists in a healthy plant structure and stress mitigation.

GUARANTEED ANALYSIS

Molybdenum (Mo)	3%
Cobalt (Co)	0.14%

Derived from: Sodium Molybdate and Co-EDTA

PRODUCT SPECIFICATIONS
